

Matrix Move Lab

Add, subtract, scale, and multiply matrices with purpose.

HIGH SCHOOL • MA.912.NSO.4

MA.912.NSO.4 "Represent and perform operations with matrices."

NAME _____

DATE _____

MATRIX OPERATION RULES

You can add or subtract matrices only when they have the same number of rows and columns. To multiply AB , the number of columns in A must equal the number of rows in B , then multiply matching row and column entries and add the products.

WORKED EXAMPLE

Find $A + B$ if $A = \begin{bmatrix} 31 & 32 \\ 33 & 34 \end{bmatrix}$ and $B = \begin{bmatrix} 35 & 36 \\ 37 & 38 \end{bmatrix}$.

1. Add entries in matching positions: $\begin{bmatrix} 31 + 35 & 32 + 36 \\ 33 + 37 & 34 + 38 \end{bmatrix}$.
2. Compute each sum: $\begin{bmatrix} 66 & 68 \\ 70 & 72 \end{bmatrix}$.

Answer: $A + B = \begin{bmatrix} 66 & 68 \\ 70 & 72 \end{bmatrix}$.

PRACTICE 6 problems

1 Find $\begin{bmatrix} 1 & -3 \\ 4 & 0 \end{bmatrix} + \begin{bmatrix} -2 & 5 \\ 3 & -1 \end{bmatrix}$.

ANSWER _____

2 Find $\begin{bmatrix} 6 & 2 \\ -4 & 7 \end{bmatrix} - \begin{bmatrix} 1 & -5 \\ 3 & 2 \end{bmatrix}$.

ANSWER _____

3 Find $-2\begin{bmatrix} 3 & -1 \\ 0 & 4 \end{bmatrix}$.

ANSWER _____

4 Find $\begin{bmatrix} 1 & 2 \\ 3 & 1 \end{bmatrix} \begin{bmatrix} 2 & -1 \\ 0 & 4 \end{bmatrix}$.

ANSWER _____

5 Find $\begin{bmatrix} 1 & 0 & -1 \\ 2 & 3 & 1 \end{bmatrix} \begin{bmatrix} 2 & 1 \\ 1 & -1 \\ 0 & 2 \end{bmatrix}$.

ANSWER _____

6 Let $A = \begin{bmatrix} 2 & -1 \\ 3 & 0 \end{bmatrix}$ and $B = \begin{bmatrix} -3 & 5 \\ 1 & -2 \end{bmatrix}$. Find $3A - B$.

ANSWER _____

APPLY IT Show your work

1

A media club tracks its social media posts. Rows represent Week 1 and Week 2, and columns represent video posts and photo posts. Matrix $A = \begin{bmatrix} 4 & 2 \\ 3 & 5 \end{bmatrix}$ shows posts made before a campaign. Matrix $B = \begin{bmatrix} 1 & 3 \\ 2 & 1 \end{bmatrix}$ shows posts made during the campaign. Find $A + B$ to show the total posts.

WORK SPACE

ANSWER _____

2

A music club sells sticker packs, keychains, and snack vouchers at two concert booths. $Q = \begin{bmatrix} 2 & 1 & 2 \\ 1 & 4 & 0 \end{bmatrix}$ gives quantities sold, with rows for Booth 1 and Booth 2 in that order. $p = \begin{bmatrix} 2 \\ 3 \\ 4 \end{bmatrix}$ gives the price of each item in dollars. Find Qp to determine the revenue at each booth.

WORK SPACE

ANSWER _____

CHALLENGE One step up

CHALLENGE

Let $A = \begin{bmatrix} 1 & 2 & 0 \\ -1 & 3 & 1 \end{bmatrix}$ and $B = \begin{bmatrix} 2 & 1 \\ 0 & -1 \\ 4 & 2 \end{bmatrix}$. Find both AB and BA .

PART 1 • PRACTICE

#	PROBLEM	ANSWER
1	Find $[[1, -3], [4, 0]] + [[-2, 5], [3, -1]]$.	$[[{-1}, 2], [7, -1]]$
2	Find $[[6, 2], [-4, 7]] - [[1, -5], [3, 2]]$.	$[[5, 7], [-7, 5]]$
3	Find $-2[[3, -1], [0, 4]]$.	$[[{-6}, 2], [0, -8]]$
4	Find $[[1, 2], [3, 1]][[2, -1], [0, 4]]$.	$[[2, 7], [6, 1]]$
5	Find $[[1, 0, -1], [2, 3, 1]][[2, 1], [1, -1], [0, 2]]$.	$[[2, -1], [7, 1]]$
6	Let $A = [[2, -1], [3, 0]]$ and $B = [[-3, 5], [1, -2]]$. Find $3A - B$.	$[[9, -8], [8, 2]]$

PART 2 • APPLY IT

1. **[[5, 5], [5, 6]]** Add the entries in matching week and post-type positions. The sum matrix is $[[5, 5], [5, 6]]$.
2. **[[15], [14]]** Multiply each booth row in Q by the price column p. Booth 1 earned 15 dollars, and Booth 2 earned 14 dollars.

CHALLENGE

$AB = [[2, -1], [2, -2]]$ and $BA = [[1, 7, 1], [1, -3, -1], [2, 14, 2]]$.

Accept any clear matrix notation that preserves the correct row and column order. For multiplication, accept correct intermediate work even if students use dot products or expanded products.
