

Shape Area Switch

Cut, slide, and calculate area.

GRADE 6 • TEKS 6.8.B

6.8.B “model area formulas for parallelograms, trapezoids, and triangles by decomposing and rearranging parts of these shapes;”

NAME _____

DATE _____

BUILD THE FORMULA

Cut a parallelogram along its height and slide the small triangle to the other side. It makes a rectangle, so its area is $A = b \times h$. A triangle is half of that rectangle, and a trapezoid can be rearranged to use the average of its two parallel bases: $A = (b_1 + b_2) \times h / 2$.

WORKED EXAMPLE

Find the area of the parallelogram in the figure. Its perpendicular height is 8 cm.

1. Use $A = b \times h$.
2. $A = 13 \times 8$.
3. $A = 104 \text{ cm}^2$.

Answer: 104 cm²

PRACTICE 6 problems

- 1** Find the area of the triangle in the figure. Its perpendicular height is 7 cm.

ANSWER _____

- 2** Find the area of the trapezoid in the figure. Its perpendicular height is 6 cm.

ANSWER _____

- 3** A parallelogram has a base of 15 cm and a perpendicular height of 9 cm. After moving a cut-off corner triangle, it forms a rectangle. What is the area of the rectangle and the parallelogram?

ANSWER _____

- 4** A triangle has a base of 18 m and a perpendicular height of 11 m. Find its area.

ANSWER _____

- 5** A trapezoid has parallel bases of 14 in. and 22 in. Its height is 10 in. Find its area.

ANSWER _____

- 6** A triangle has an area of 72 cm² and a base of 16 cm. What is its perpendicular height?

ANSWER _____

APPLY IT Show your work

- 1** Jalen is covering a parallelogram-shaped skateboard deck graphic. The graphic has a base of 26 cm and a perpendicular height of 11 cm. He cuts off one corner triangle and slides it to make a rectangle. What area will the graphic cover?

WORK SPACE

ANSWER _____

- 2** A community garden has a trapezoid-shaped pollinator bed. Its parallel sides are 19 m and 31 m, and its height is 14 m. How many square meters of soil will cover the bed?

WORK SPACE

ANSWER _____

CHALLENGE One step up

A parallelogram has a base of 21 cm and a perpendicular height of 16 cm. A diagonal cuts it into two triangles. Find the area of each triangle. Explain why the two areas are equal.

WORK SPACE AND ANSWER

PART 1 • PRACTICE

#	PROBLEM	ANSWER
1	Find the area of the triangle in the figure. Its perpendicular height is 7 cm.	42 cm²
2	Find the area of the trapezoid in the figure. Its perpendicular height is 6 cm.	78 cm²
3	A parallelogram has a base of 15 cm and a perpendicular height of 9 cm. After moving a cut-off corner triangle, it forms a rectangle. What is the area of the rectangle and the parallelogram?	135 cm² for both the rectangle and the parallelogram
4	A triangle has a base of 18 m and a perpendicular height of 11 m. Find its area.	99 m²
5	A trapezoid has parallel bases of 14 in. and 22 in. Its height is 10 in. Find its area.	180 in.²
6	A triangle has an area of 72 cm ² and a base of 16 cm. What is its perpendicular height?	9 cm

PART 2 • APPLY IT

- 286 cm²** The rearranged shape is a 26 cm by 11 cm rectangle. Multiply 26×11 to get 286 cm².
- 350 m²** Average the parallel bases: $(19 + 31) / 2 = 25$. Multiply 25×14 to get 350 m².

CHALLENGE

168 cm² each; the parallelogram has area $21 \times 16 = 336 \text{ cm}^2$, and a diagonal divides a parallelogram into two equal-area triangles, so $336 / 2 = 168 \text{ cm}^2$.

Accept equivalent formulas and correct area units. For the challenge, accept an explanation that a diagonal creates two congruent triangles or two triangles with equal area.
